**Atomik**  
Seeds®

**ATOMIK SEEDS** is a project that started in 2006. Faced with the difficulty of developing and managing a company, up until now its owners decided to work through other means and to continue developing their genetic lines.

What started out as the search for a pain relief drug ended up becoming a hobby, obtaining the best genetics, crossbreeding in a quest for new sensations... All this knowledge and the market itself drew this group of cultivators to embark on a large-scale project upon seeing the results they were obtaining. In a short period of time, they professionalised their activity and carried out some exceptional work, preparing a cultivation with unique and top-quality genetics, focusing all their attention on achieving the best possible feminised strain.

Despite not being well-known, **ATOMIK SEEDS** can boast of being one of the first seed banks in Spain to develop feminised cannabis seeds.

Offering a good product and counting on qualified staff, the possibilities of success of any company multiply, and this is precisely what

## **ABOUT US**

**ATOMIK SEEDS** trusts in. They had the cultivators and the genetics, but they needed entrepreneurial skills; anyone who owns a business knows about the difficulties of managing one.

The cannabis seed market is very competitive; every day, there are new seed banks and new genetics. Huge marketing campaigns, large investments of capital, legal problems, planning and many other factors must be taken into account, and that is very difficult.

After several years with the seed bank project at a standstill, Atomik has decided that the time is right to launch **ATOMIK SEEDS** onto the market, with more enthusiasm, strength and energy than ever, with fully charged batteries and a catalogue full of gems ready to be cultivated.

We may be new to cannabis websites, fora, catalogues, magazines and in the best online and offline growshops, but we have been working professionally and efficiently behind the scenes for almost 10 years, and that is evident in the quality of the seeds.

A close-up photograph of a cannabis stem, showing the intricate details of the trichomes and the developing buds. The stem is green and covered in fine, white, hair-like structures. The background is a soft, out-of-focus green, suggesting a healthy cannabis plant in a cultivation environment.

## ABOUT OUR SEEDS

Cultivators who decide to purchase **ATOMIK SEEDS** can be sure that their future harvests will have the best possible genetic foundations, providing vigour, quality and large doses of potency to their indoor and outdoor cultivations.

Our background in the harvesting, breeding and improvement of exceptional varieties of cannabis dates back to over 10 years ago.

This experience enables us to create seeds for cultivators looking for guaranteed quality.

Our attention to detail and our careful monitoring of the storage and packaging conditions guarantee a 100% success rate in the germination of cannabis seeds.

**ATOMIK SEEDS** is the result of over ten years of work, during which we have had the support of genetics and cultivators from around the world. Thanks to this cultural and botanical diversity, we have been able to obtain the results that we are presenting to you. We are truly proud of them.

All **ATOMIK SEEDS'** varieties are carefully worked on, and are pleasing to the palate. In addition, they are easy to cultivate and are very productive, ideal for beginner cultivators or experts who seek large yields of excellent quality.

After the selection process, crossbreeding and the stabilisation of several varieties of cannabis, we managed to develop high-quality feminised seeds.

With tastes and aromas that would make you enjoy all the more.

# ATOMIKA

♀ FEMINISED

**Composition:** Hybrid with sativa dominance  
**Genotype:** JACK HERER X NORTHERN LIGHTS  
**Flowering:** 12-hour light cycle: 65-70 days  
**Outdoors:** Early October  
**Yield:** Very high  
**Height outdoors:** Approximately 3.5 metres  
**THC:** High (23%)

PACK **x1 7€** **x3 18€** **x5 28€** **x10 54€**

**Atomika** is the most potent cannabis plant you can get grown from seed and if that is not the case it is sure to be among your favourites.

**Atomika** is a wide-leaved sativa plant with a very psychoactive and long-lasting effect. A quick high that wears off slowly, ending with a notably more physical effect.

Its great resistance to botrytis (mould) and pests make it an ideal plant for outdoor growing, yielding very productive harvests.

It performs outstandingly outdoors. Provided sufficient space is left between plants, there is quality substrate, abundant water and it is adequately fertilised, we will have a spectacular plant that will provide abundant harvests of large, resinous buds. It is a plant that assimilates fertiliser very well.

Another vital aspect of **Atomika** to be highlighted is its taste and aroma; intense citric tones shrouded in small contrasts of incense and pine wood. After adequate curing these aromas and tastes will be multiplied, taking your palate to the nirvana of essences.

# ATOMIK HAZE

 FEMINISED

**Composition:** Hybrid with 80% sativa dominance

**Genotype:** SUPER SILVER HAZE

**Flowering:** 12-hour light cycle: 70-75 days

**Outdoors:** Late October

**Yield:** Very high

**THC:** High (average 20%)

PACK  7€  18€  28€  54€

**Atomik Haze** is a feminised cannabis seed of sativa origin.

This cannabis plant produces an excellent yield with unprecedented vigour when cultivated both indoors and outdoors, where the grower will have no problem harvesting a plant with a generous yield and of unique quality.

Growers familiar with it say that **Atomik Haze** is a strong and healthy variety of cannabis, with rapid growth, a delight for the experienced grower looking for those classic Haze genetics, and for the beginner looking for quality without too many difficulties along the way; a versatile variety of cannabis of outstanding quality.

This version of Haze stands out due to its thick, dense smoke with a strong smell of incense; some smokers say it is the closest they have seen to a “botafumeiro” (a huge incense burner used in Santiago de Compostela cathedral). Metallic, fresh hints can be detected. These have a long-lasting effect on the palate, a deep aftertaste that incites the next drag.

**Genotype:** BIG BUD X RUDELARIS

**Flowering:** 18 or 20 hours of light: 55-60 days  
(Indoor/Outdoor)

**Indoor yield:** up to 60 gr/plant

**Outdoor yield:** 100 gr/plant

**Yield:** Average

**THC:** Average (15%)

# AUTO BUD

 AUTOFLOWERING

**Auto Bud** is an autoflowering feminised cannabis seed based on indica genetics crossed with the most stable and accomplished autos to date. Growing cannabis has never been as easy and practical. Ideal for discreet growers who cultivate on balconies, as the plants do not grow high and are not overly affected by light contamination from street lamps.

It is a medium-sized plant, no higher than a metre, and has an extremely short life-cycle, 65-70 days from germination to harvest, in both indoor and outdoor cultivation.

One of the most relevant aspects of this variety is its powerful effect, which combines extreme relaxation with mellow well-being, a feeling that leaves a characteristic good taste in the mouth.

**Auto Bud** promises to be a revolution with respect to the first autoflowering seeds that appeared on the market, a real turning point.

**Genotype:** SUPER SILVER HAZE X RUDELAIRS  
**Flowering:** 18 or 20 hours of light: 75-85 days  
 (Indoor/Outdoor)  
**Yield:** High  
**THC:** Average-High (15%)

# AUTO HAZE

AUTOFLOWERING

**Auto Haze** is an autoflowering feminised cannabis seed. This is the new generation of autoflowering plants; in recent years we have worked on these varieties and have achieved positive results. This is a very well-accomplished strain as it combines the most divergent genetics, offering an excellent quality result.

We have improved its production to a large extent; now it's possible to harvest up to 100 grams per plant. Although it may seem improbable, under all those leaves these plants hide a significant yield.

Autoflowering varieties require a large quantity of nutrients from the start of their cultivation. They are very greedy. It is highly recommended that they are planted in the definitive pot, as transplanting stresses them and we cannot lose those 2 or 3 days of recovery because their life cycle is very short and it could affect the final yield.

Very resinous, it produces a balanced effect between relaxing and exciting, giving a feeling of well-being.

# BLUEBERRY AK

FEMINISED ♀

**Composition:** 80% indica

**Genotype:** BLUEBERRY

**Flowering:** 12-hour light cycle: 65 days

**Outdoors:** Early October

**Yield:** High

**THC:** High (19%)

PACK **x1 6€** **x3 15€** **x5 23€** **x10 44€**

**Blueberry** is a feminised cannabis seed that was created over 40 years ago back in the 1970s by cultivator DJ Short. It has been a long time but this variety has not only been able to survive over time, but has always been at the top of the rankings of Cannabis Cups at an international level. Not only that, but it is one of the favourite cannabis varieties of growers around the world. Our **Blueberry AK** is an indica dominant that will last over time – forever.

It is the most easily distinguishable cannabis plant, its blueish purple colour leaves no room for doubt when it is subjected to temperatures lower than 10°C at the end of the flowering period. It has a small and compact structure, a large quantity of dark leaves cover the branches, meaning that it absorbs a lot of light and therefore offers high yields, which can reach 1500 g per plant outdoors, provided there is some prior experience. Outdoors it will offer surprising results.

Its fruity aroma multiplies once inhaled.

# BLUE CHEESE

FEMINISED ♀

**Composition:** Indica dominance  
**Genotype:** UK CHEESE X BLUEBERRY  
**Flowering:** 12-hour light cycle: 60 days  
**Outdoors:** Early October  
**Yield:** High  
**THC:** High (19%)

PACK **x1 6€** **x3 15€** **x5 23€** **x10 44€**

**Blue Cheese**, two of the world's most famous varieties are the basis for this strain, UK Cheese and Blueberry.

This variety requires a short vegetative growth period, as during flowering it can still grow threefold; when it has reached a height of half a metre it is a good time to change the photoperiod in indoor plantations. The flowering period for **Blue Cheese** is exceptionally fast. Its cultivation is rather suited to growers with prior experience and high tolerance when consuming the plant due to its potency.

The Blueberry genetics give it a purple tone when subjected to low temperatures, which it withstands without any problems thanks to these genetics. **Blue Cheese** resists low temperatures and humidity, hindering outbreaks of mould.

The effect of its buds is energetic and cheerful, but with a narcotic edge, a combination of sensations that the body assimilates in a pleasant way. A powerful psychoactive effect of an indica nature highlights the personality of this exquisite variety.

**Composition:** Hybrid with indica dominance  
**Genotype:** UK SKUNK X AFGHANI  
**Flowering:** 12-hour light cycle: 55-60 days  
**Outdoor harvest:** At the very end of September, can be early October  
**Yield:** Average  
**THC:** Average - High (16%)

PACK **x1** 6€ **x3** 15€ **x5** 23€ **x10** 44€

**CHEESE**  
 ♀ FEMINISED

**Cheese** is one of the world's most famous varieties of cannabis. There are many aspects that make this variety from the United Kingdom so special. Winner of several Cannabis Cup prizes and featuring on the menus of Amsterdam's most select coffee shops.

**Cheese** is based on the selection of a Skunk with genetic defects but which in turn had the virtue of a strong smell and a different, sweet, intense and long-lasting taste.

The use of carbon filters, of systems that minimise the smell are essential when cultivating **Cheese**, as the smell is extremely intense.

It is a plant with indica predominance, and stands out due to the ease of its cultivation, suitable for all types of growers. The beginner will learn a lot and will feel good about themselves when they see how their work is rewarded. It is one of those varieties that makes one feel like a professional upon seeing the results.

**Composition:** 50% Indica / 50% Sativa

**Genotype:** BIG BUD X SKUNK

**Flowering:** 12-hour light cycle: 50-55 days

**Outdoors:** Late September

**Yield:** Very high, ideal for those looking for quality and a high yield

**THC:** High (18%)

# CRITICAL MASS

♀ FEMINISED

**Critical Mass** is one of the best known varieties at the moment, particularly in Spain, where its cultivation in recent years has increased spectacularly thanks to the performance of the plant. Its prestige is reflected in national competitions and in the fact that many seed banks have included it in their catalogues, though this one is undoubtedly more productive.

Ideal for inexperienced growers looking for good results. For those looking for massive, high-quality harvests, but above all for those seeking to fall in love with the characteristic effect of **Critical Mass**.

Its effect is overwhelming, a wild mixture of happiness and excitement, along with the calmness and well-being of a fairytale, a delight for the palate, as we find fruity nuances mixed with natural essences such as incense or earth.

The last stage of its growth is amazing; perfect, large central buds surrounded by powerful, long branches coated in sweet and penetrating resin. Odour control systems are essential when cultivating this variety.

# POWER SKUNK

♀ FEMINISED

**Composition:** 60% indica

**Genotype:** AFGHAN X SKUNK

**Flowering:** 12-hour light cycle: 55 days

**Outdoors:** End of September or beginning of October

**Yield:** High

**THC:** Average - High (16%)

PACK **x1** 4€ **x3** 11€ **x5** 18€ **x10** 35€

**Power Skunk** is a classic cannabis seed. It has become one of the favourite cannabis plants of the new generations of growers.

**Power Skunk** is a compact, homogeneous variety with a short flowering period that produces solid and very resinous buds.

With this plant a good yield is very easy, meaning that it's ideal for and preferred by the new generations of growers.

Appropriate for indoor and outdoor growing thanks to its short flowering period.

# WHITE WIDOW

♀ FEMINISED

**Composition:** 70% indica  
**Genotype:** AFGHAN X SKUNK  
**Flowering:** 12-hour light cycle: 60 days  
**Outdoors:** Early October.  
**Yield:** High  
**THC:** High (18%)

PACK **x1** 5€ **x3** 14€ **x5** 22€ **x10** 40€

**White Widow** is a cannabis seed that needs no introduction. Showered with awards and praised by the world's best growers since its birth over 20 years ago in the Netherlands.

A virtue to be highlighted of this version is its improved performance outdoors; this selection in particular is very tough and takes well to being grown outdoors, offering top quality results. It can reach a height of up to 2 metres and the yield per plant is very high, with improved quality and a shorter flowering period.

**White Widow** stands out due to its high concentration of resin on the buds; soft, heavy and sticky, slightly airy and perfect for the curing process. The plants are white due to the large quantity of THC glands.

Its buds are very compact and the high is an excellent balance between the mental and physical effects.

The taste is the authentic cannabis taste, clean and fresh, deep and constant.
